

RECENT WORKS

The end of the year brought with it a flurry of activity. Some jobs were nearing completion and others popped up out of the blue.

Neil and Steve attended a callout to a slip at Mokau. They utilised HeliA1 Ltd to get the best overview.

A brief scaling window allowed already loose debris to be rattled off onto the road. Preparations were made for a full team to be present the following day, to complete this work.

After more than 6 months on site at SH36 Mangorewa, this site work was completed in January.

John Garvey (clients Engineer) took a closer look under our supervision. This is an offer we make to most clients however not many take us up on the offer!

Meshing on the peak nearing completion.

Dobb's Bluff is now well into the final phase of it's remedial works. More than 100 rolls of Maccaferri mesh will help to restrain any rockfall onto this section of road and allow safer passage for vehicles.

Late last year we became involved with an amazing roofing system. Installations have been made at 'The Base' in Hamilton and work on Eden park continues. For those of you who may have seen the 'Watercube' at the Beijing Olympics, this is the same Vector Foiltec product.

With so much on the go our staff numbers have expanded too.
